Bitlogix offers a new online projection calculator for the German projector market

A new generation of projection calculator is now available from Bitlogix for the Eiki projector brand. The software allows users to recalculate the most suitable projector models and projection lenses by specifying throw distance, picture width or height.

Dallas, Texas, September 29, 2009 – Bitlogix Software LLC announces the availability of a free online projection calculator for the Eiki projector brand. The new Bitlogix projection calculator is truly unique because users can determine the most suitable projector and lens choices that best fits their installation perimeters. The user simply enters throw distance, picture width or height and the software does all the work. It automatically recalculates all possible projector models and lenses for the selected screen size and throw distance. The Bitlogix software cuts projection calculation time down to seconds.

The new concept of the Bitlogix projection calculator empowers users to focus on planning different projection scenarios by using software to select the most suitable projector models and projection lenses for any given screen and room size.

The Bitlogix projection calculator allows users the choice to select a total of four different projection calculation types and to adjust the most important projection parameters on the fly. The projection calculator also features a PDF tool to print calculation results to a PDF file.

The Bitlogix projection calculator is a showcase software project for Eiki resellers and end users in Germany. The projection calculator is freely available on Bitlogix's website

<http://www.bitlogix.com/projectioncalculator>.

The software works with all Java enabled operating systems such as Windows, Mac OS X, Novell SUSE Enterprise Linux, Red Hat Enterprise Linux, Ubuntu Linux, OpenSolaris, and Sun Solaris x86 and SPARC platforms.

Bitlogix Software LLC, based in Dallas, Texas develops and markets network software and hardware for audio visual applications to assist in controlling and maintaining projectors and flat panel displays over a LAN/WAN. Bitlogix's products are designed for the educational, government and corporate market where large amounts of projectors and displays need to be controlled and managed over a network.
